Statement of Goals

Research Mission

More and more people are programming: not only those with traditional Computer Science backgrounds, but also physical scientists, journalists, and more. We have an unprecedented opportunity to shape how people reason about software—and the systems that people do not yet call software. The goal of my research is to make *provable guarantees ubiquitous*. I am interested in designing (1) programming models, (2) language implementation strategies, (3) programming tools, and (4) software verification tools to make it easier for people to create the software they intended.

Outreach Mission

Public understanding and consumption determine the impact of research. In addition to educating my students to understand the importance of programming languages research, I am interested in *improving science communication* and *facilitating commercialization of technical ideas*. From 2013-2015 I co-directed NeuWrite Boston, a working group of scientists and science writers. To narrow the gap between academia and industry, I co-founded the Cybersecurity Factory, an accelerator for security startups.

Research Directions

I am investigating how the following two programming models facilitate the creation of programs and analyses that were previously difficult or impossible.

- **Policy-agnostic programming for security and privacy.** As an alternative to approaches for detecting information leaks, I propose a new programming model that factors out the specification of security and privacy concerns from the rest of the program and enforces the properties *by construction*. In my prior work I designed a language semantics for policy-agnostic programming with *informaton flow policies* and developed dynamic and static enforcement techniques. I am currently interested in (1) extending the approach for statistical privacy and (2) techniques for retrofitting legacy code with the policy-agnostic model, for purposes of fixing bugs and interacting with new policies and code.
- **Rule-based programming for biological modeling.** Traditionally, researchers model intracellular signalling using systems of ordinary differential equations (ODEs), but there are two problems with ODE models. First, a precise model requires a different ODE for each interaction between agents, causing ODE models to scale poorly with respect to number of agent types. Second, ODE models have little structure that we can exploit for scale-mitigating analyses. As an alternative, rule-based languages allow the representation of models as programs describing rewrites over graphs, where nodes correspond to proteins and edges describe protein complexes. Not only are these programs more concise than the corresponding ODE systems, but their structure also supports various analyses that are otherwise not possible. My current work focuses on analyzing *causal relationships* between rules, and combining causal information with language design and model-checking techniques to create biologically relevant model analyses.

Professional Employment

- 2016-present **Assistant Professor**, Carnegie Mellon University, Pittsburgh, PA.
Tenure-track position in the Computer Science Department with affiliate appointment in the Computational Biology Department.
- 2015-2016 **Assistant Professor (Adjunct)**, Carnegie Mellon University, Pittsburgh, PA.
Accepted and deferred tenure-track Assistant Professor position.

- 2015-2016 **Postdoctoral Researcher**, *Harvard Medical School*, Cambridge, MA.
Developing program verification and analysis techniques to aid in the construction of rule-based, graphical kinetic models for intracellular signalling.
- Summer 2015 **Co-founder**, *Cybersecurity Factory*, Cambridge, MA.
Started accelerator for early-stage cybersecurity companies with the goal of turning more research ideas into startups. Partnered with venture firm Highland Capital to run pilot. Program continues to run today.
- 2008-2015 **Research Assistant**, *Massachusetts Institute of Technology*, Cambridge, MA.
Graduate research in programming languages.
- Summer 2012 **Software Engineering Intern**, *Facebook, Inc.*, Menlo Park, CA.
Built verifier for backend privacy language. Continued contract work for four months post-internship and filed patent on resulting system.
- Summer 2010 **Research Intern, Programming Languages and Analysis Group**, *Microsoft Research*, Redmond, WA.
Worked with Nikhil Swamy and Juan Chen on extending a security-typed language F^{*} to support secure marshalling and cryptographic proofs. Resulted in publication of paper on the F^{*} language in ICFP.
- Summer 2009 **Research Intern, Operating Systems Group**, *Microsoft Research*, Redmond, WA.
Worked with Chris Hawblitzel to build an operating system kernel verified for type-safety. Resulted in publication of paper on resulting Verve system in PLDI, Best Paper award, and the filing of a patent.
- Summer 2008 **Software Engineering Intern**, *Peerium, Inc.*, Cambridge, MA.
Worked at start-up creating a dependently typed functional language written in Haskell. Created parser for core language; wrote compiler optimizations; worked on GUI libraries.
- Summer 2007 **Software Engineering Intern**, *Google, Inc.*, Santa Monica, CA.
Completed standalone project on video search team using C++. Received full-time offer.
- Summer 2006 **Research Intern**, *Computational Biology Initiative, Harvard Medical School*, Boston, MA.
Worked with Dennis Wall and Leon Peshkin to develop and implement computational processes for tracing evolution and coevolution of presynaptic receptors.
- Summer 2005 **Software Development Intern**, *Mellon Financial*, Pittsburgh, PA.
Worked on data mapping and management project using SQL and ColdFusion.

Education

- 2010–2015 **Ph.D. computer science**, *Massachusetts Institute of Technology*, Cambridge, MA, USA.
Advisor: Armando Solar-Lezama. Thesis: *A Framework for Automatically Enforcing Information Flow Policies*.
- 2008–2010 **M.S. computer science**, *Massachusetts Institute of Technology*, Cambridge, MA, USA.
Advisor: Armando Solar-Lezama. Thesis: *Specification-Enhanced Programming*.
- 2004–2008 **A.B. computer science**, *Harvard University*, Cambridge, MA, USA.
Graduated *Magna Cum Laude*. Senior thesis advised by Greg Morrisett.

Awards and Honors

- 2016 *MIT Technology Review* Innovators Under 35.
Named one of thirteen alumni Centennial Laureates of The Ellis School.
- 2015 Keynote speaker, PrivacySecurityRisk.
Paul L. Penfield Student Service Award, MIT EECS.
- 2014-2015 Levine Fellowship.
- 2013 *GigaOm* 10 for 2013 Cloud Trailblazers.
- 2012-2013 Facebook Fellowship.
- 2010 Best Paper Award, Programming Language Design and Implementation (PLDI).
- 2008-2011 National Science Foundation Graduate Research Fellowship.
- 2008 Inducted into Phi Beta Kappa honor society.

Publications

Refereed Conference/Workshop Papers

- SASB 2017 Chelsea Voss, **Jean Yang**, and Walter Fontana. A tool for automated inference in rule-based biological models. *Static Analysis in Systems Biology Workshop*, 2017.

- PLDI 2010 **Jean Yang** and Chris Hawblitzel. Safe to the Last Instruction: Automated Verification of a Type-Safe Operating System. *Programming Language Design and Implementation*, 2010. **Best Paper Award**.

Technical Reports

- 2016 Nadia Polikarpova, Jean Yang, Shachar Itzhaky, and Armando Solar-Lezama. Type-Driven Repair for Information Flow Security. <https://arxiv.org/abs/1607.03445>

Workshop Presentations

- SASB 2017 Jonathan Laurent, **Jean Yang**, and Walter Fontana. Causal analysis of rule-based models through counterfactual reasoning. *Static Analysis in Systems Biology Workshop*, 2017.

Patents Issued

- 2013 Stephen C. Heise, **Jean Yang**, Dwayne Reeves, and Yiding Jia. Privacy verification tool. US20140282837 A1, filed March 15, 2013 and issued April 14, 2015.
- 2010 Chris Hawblitzel and **Jean Yang**. Automated verification of a type-safe operating system. US8341602 B2, filed February 27, 2010 and issued December 25, 2012.

Software Artifacts

Jeeves, a policy-agnostic language for automatically enforcing information flow policies, implemented in Python. Also released with Jeeves is an implementation of Jacqueline, a policy-agnostic web framework implemented on top of the Python Django web framework. (<https://github.com/jeanqasaur/jeeves>)

Ask Reeves, a backend privacy verifier. Built while interning at Facebook.

Verve, the first operating system automatically verified end-to-end for type safety. Built while interning at Microsoft.

Service

Technical Program Chairs

- 2018 Co-Chair, Principles of Programming Languages Artifact Evaluation Committee (POPL AEC), with Catalin Hritcu
- 2017 Static Analysis for Systems Biology (SASB), with John A. Bachman
Co-Chair, Principles of Programming Languages Artifact Evaluation Committee (POPL AEC), with Stephen Chong

Program Committees

- 2017 Principles of Programming Languages (POPL)

Computational Methods for Systems Biology (CMSB)

- 2016 Principles of Programming Languages Student Research Competition (POPL SRC)
IEEE Symposium on Security and Privacy (Oakland)
Programming Language Design and Implementation Program Committee (PLDI)
- 2015 Principles of Programming Languages Artifact Evaluation Committee (POPL AEC)
- 2014 ML Workshop

Other Committees

- 2018 Publicity Chair, Principles of Programming Languages Artifact Evaluation Committee (POPL)
- 2017 Reviewer, Rita Allen Fellowship for Science Communication with WGBH Boston

University Service

- 2017-2018 Faculty Hiring Committee, Computer Science Department, CMU
- 2017 Security and Privacy Concentration Committee, School of Computer Science, CMU
- 2017-present Undergraduate Review Committee, School of Computer Science, CMU

Academic Advising

Current PhD Students

- Travis Hance, Ph.D. student (CMU, 2017-present)
- Jonathan Laurent, Ph.D., student (CMU, 2016-present)

Postdoctoral researchers

- Abhishek Bicchawat, postdoctoral researcher (CMU, starting 2018)
- Qinsi Wang, postdoctoral researcher (CMU, 2016-present)

Research Experience for Undergraduates

- Jeanne Luning Prak, CMU, fall 2007-present, working on case studies for Binah
- Jacob Van Buren, CMU, fall 2017-present, working on analyses towards verifying JavaScript using refinement types
- Scott Krulcik, CMU, spring 2017-present, working on policy-agnostic programming for asynchronous dependency injection systems
- Jacob Imola, CMU, spring 2017-present, working on policy-agnostic programming for statistical privacy
- Serena Wang, CMU, spring 2017-present, working on inferring information flow predicates from conditional statements in programs
- Jordan Brown, CMU, fall 2016-present, working on Binah, a library for verifying database-backed web applications written in the Yesod Haskell web framework
- Ariel Jacobs, MIT, spring 2013-summer 2013, worked on applying policy-agnostic programming to HIPAA
- Benjamin Shaibu, MIT, spring 2012-spring 2014, worked on case studies for policy-agnostic programming

Doctoral Dissertation Committees

- Ferdinanda Camporesi, École Normale Supérieure, *Formal and exact reduction for differential models of signalling pathways in rule-based languages*. Defended January 2017.

Masters' Theses Supervised

- Chelsea Voss, MIT EECS, worked on *A Tool for Automated Inference in Rule-Based Biological Models*, completed May 2016.
- Travis Hance, MIT EECS, worked on *Jelf: A Web Framework for Automatic Enforcement of Privacy Policies*, completed May 2014.

Contract and Grant Support

2018-2021	Funder: DARPA Title: High-Expressivity World Modeling People: Jean Yang (PI), Qinsi Wang Awarded: \$973,945
2017-2018	Funder: Jane Street Capital Title: Gift People: Jan Hoffmann, Jean Yang Awarded: \$25,000
2017-2018	Funder: Facebook Title: Gift People: Jean Yang Awarded: \$30,000
2017-2021	Funder: NSF Title: SaTC: CORE: Towards a Usable, Practical, and Provably Secure Browser Infrastructure People: Limin Jia (PI), Ljudevit Bauer, Matthew Fredrikson, Jean Yang Awarded: \$1,200,000
2017-2018	Funder: Center for Machine Learning and Health Title: A Framework for Managing Patient Privacy People: Jean Yang (PI), Matthew Fredrikson, Jian Ma Awarded: \$300,000
2017-2019	Funder: NSF Title: CRII: SaTC: Repairing Code from Inferred Specifications of Information Flow Security People: Jean Yang (PI) Awarded: \$174,794
2017-2019	Funder: DARPA Title: KaZam: An integrated inference engine for assembly People: Jean Yang (PI) Awarded: \$400,000

Teaching

- Spring 2018 **Co-Instructor, Principles of Imperative Computation (15-122)**, *Carnegie Mellon University*.
Taught half of 400+ person course teaching students about imperative programming in C-like languages through code contracts and proof of correctness.
- Spring 2017 **Co-Instructor, Software Foundations of Security and Privacy (15-316)**, *Carnegie Mellon University*.
Co-designed and co-taught new undergraduate course with Matthew Fredrikson, with goal of teaching students to formally specify and prove security and privacy properties, with topics including safety, information flow, and statistical privacy. Reviews averaged 4.7/5.0 (teaching) and 4.6/5.0 (course) with course size 12.
- “Awesome class, good presentation and interesting topics.”
 - “...I made \$1000 from this course! After learning about implicit flows, I was able to identify security bugs in Instagram, caused by their lack of information flow control. Since it was a security bug, I received a reward from their bug bounty program.”
 - “...I really liked this class! It was great to look at these security concepts in a functional programming context.”
 - “Jean also gave some really great lectures, especially the more technical ones about information flow type systems.”
 - “I liked the course very much and the homework load was very fair.”
 - “Lectures were really fun and *[sic]* felt like I learned a lot over the course of the semester.”
- Fall 2016 **Instructor, Domain-Specific Languages (15-819)**, *Carnegie Mellon University*.
Designed and taught experimental discussion-based graduate special topics seminar on programming language design and evaluation across a variety of domains, with focused units on systems programming, security and privacy, and biological modelling. Reviews averaged 4.6/5.0 (teaching) and 4.0/5.0 (course) with course size of 8.
- “Definitely offer this course again and at the undergraduate level. Not many discussion-based courses happen in CS and they should.”

- "I feel like this course gave me a great opportunity to read a bunch of DSL papers and really understand the current state of the field. Thanks for a great semester!"
- Fall 2010 **Teaching Assistant, Foundations of Program Analysis, Massachusetts Institute of Technology.**
Designed and graded assignments and held recitations for graduate-level program analysis course.
- January 2010 **Instructor, C Memory Management and C++ Object-Oriented Programming, Massachusetts Institute of Technology.**
Designed and co-taught a for-credit Independent Activities Period (IAP) course for over 100 undergraduates. Prepared lectures and assignments; managed multiple graders; published materials on MIT's Open Courseware.
- January 2010 **Instructor, So You've Always Wanted to Learn Haskell?, Massachusetts Institute of Technology.**
Designed and co-taught an Independent Activities Period (IAP) course introducing the Haskell language and its applications.
- Spring 2008 **Teaching Fellow, Principles of Programming Languages, Harvard University.**
Helped with new course introducing programming languages concepts using the Coq proof assistant. Effectiveness rating 4.6/5.0. Received Certificate of Distinction in Teaching.
- Spring 2007 **Teaching Fellow, Introduction to Computer Science II, Harvard University.**
Responsible for problem sets, exams, section, and office hours for course using Scheme and C++. Effectiveness rating 4.6/5.0; nominated for Undergraduate Council's Levenson Teaching Prize.
- Fall 2006 **Teaching Fellow, Introduction to Formal Systems, Harvard University.**
Responsible for problem sets, exams, section, and office hours for course on computational models and complexity. Effectiveness rating 4.2/5.0. Nominated for departmental teaching award.
- Fall 2005 **Course Assistant, Introduction to Calculus, Harvard University.**
Graded problem sets and ran weekly problem session. Effectiveness rating 4.4/5.0.

Speaking

Invited Research Talks

- 2017 "Preventing Information Leaks by Construction"
 - SPLASH-I, co-located with SPLASH (October 2017)
 - Curry On Barcelona!, co-located with PLDI (June 2017)
 - Programming Languages Mentory Workshop, colocated with PLDI (June 2017)
 - École Normale Supérieure (January 2017)
- "Analyses for Rule-Based Models of Cellular Signalling"
 - University of Alabama at Birmingham (September 2017)
 - Cambridge University (May 2017)
- "Policy-Agnostic Programming for Preventing Information Leaks"
 - INRIA Paris (June 2017)
 - Oxford University (May 2017)
 - The 2nd Summit on Advances in Programming Languages (May 2017)
- "Policy-Agnostic Programming for Database-Backed Applications," Cornell University (April 2017)
- "Preventing Information Leaks by Construction," École Normale Supérieure (January 2017)
- 2016 "A Logical Deduction Tool for Assembly," 6th Workshop on Logic and Systems Biology (July 2016)
- 2015 "Preventing Information Flow Leaks with Jeeves," Singapore Data Privacy Workshop (July 2015)
- "Preventing Information Leaks with Jeeves"
 - Columbia University (Special Seminar, February 2015)
 - University of California, Berkeley (Special Seminar, March 2015)
 - University of Illinois, Urbana-Champaign (Special Seminar, April 2015)

Other Interests and Activities

My interests in programming language design and software verification come from a desire to empower. For similar reasons I am interested in promoting equal opportunity in science, technology, engineering, and mathematics (STEM) fields, as well as science communication and outreach. My main activities have been as follows:

- In 2009 I co-founded **Graduate Women at MIT**, an organization that, as of spring 2014, had 1,800 mailing list members, over 80 planning committee members, and an annual budget of over \$20K involved in its three flagship activities: the fall Leadership Conference, the Spring Empowerment conference, and a year-round mentoring program. We won the William L. Steward, Jr. Award for “outstanding contributions” to extracurricular activities.
- In 2010 I started the **MIT Programming Languages and Software Engineering Offsite**, now an annual mini-conference of the 6+ research groups working in related areas at MIT.
- From 2013-2015 I ran **NeuWrite Boston**, a collaborative working group of scientists and writers, with Amanda Geffer, author of *Trespassing on Einstein's Lawn*.

As an undergraduate at Harvard I co-founded the Harvard College Engineering Society, an activity that involved starting the RoboCup team for competing in autonomous soccer competitions. I am happy to see that the team remains active today.
